

Flexible IT Solutions for your Business Needs

Dimdim

Web Conferencing That Works!

Dimdim is an open source or commercial web conferencing service where you can share your desktop, show slides, collaborate, chat, talk and broadcast via webcam with absolutely no download required to host or attend meetings.

Flexible

The Dimdim Web Meeting service is available in open source, professional and commercial enterprise editions capable of supporting thousands of attendees. And, unlike all other web meeting solutions, Dimdim is available in both on site (you install it on your servers) and hosted (we install it on ours) configurations.

Easy Open Affordable

Like you, many have tried all those other web conferencing solutions and found them exceedingly expensive, difficult to implement and impossible to customize. Dimdim was created as the easy, open and affordable web conference solution.

Dimdim just works

Dimdim just works - no software to download or maintain, and it takes only a few clicks to join or host your very own meetings. You'll be meeting in seconds. And, you are not locked into a Windows Active-X download that only works on Microsoft environments. This means that Dimdim is cross platform compliant, and there is no more scrambling at the last minute to find out what your customers need to view your conference.

See & Hear

Dimdim's built-in VoIP capability is a godsend to customers with limited access to quality phone service, providing free calling to and from any computer with a microphone and an Internet connection. And, they have added a free teleconference service to boot. The powerful video broadcasting, screen sharing and web page browsing features scale elegantly with your bandwidth - thanks to SyncroLive™ - all automatically.

APOGEE SUITE™
