

Flexible IT Solutions for your Business Needs

What is Moodle?

Moodle is an Open Source Course Management System (CMS), also known as a Learning Management System (LMS) or a Virtual Learning Environment (VLE). It has become very popular among educators and corporations around the world as a tool for creating online dynamic web sites for their student and staff training.

The focus of the Moodle project is always on providing the best tools to manage and promote learning, but there are many ways to use Moodle:

- Moodle has features that allow it to scale to very large deployments with thousands of students, yet it can also be used for a primary school or an education hobbyist and small businesses
- Many institutions use it as their platform to conduct fully online courses, while some use it simply to augment face-to-face courses (known as blended learning)
- Many of our users love to use the many activity modules (such as Forums, Wikis, Databases and so on) to build richly collaborative communities of learning around their subject matter (in the social constructionist tradition), while others prefer to use Moodle as a way to deliver content to students (such as standard SCORM packages) and assess learning using assignments or quizzes
- It promotes social constructionist pedagogy (collaboration, activities, critical reflection, etc.)

Moodle features:

- A simple, lightweight, efficient and compatible, low-tech browser interface
- Easy to install on almost any platform that supports PHP. Requires only one database (and can share it)
- Full database abstraction supporting all major brands of database (except for initial table definition)
- Course listing shows descriptions for every course on the server, including accessibility to guests
- Courses can be categorized and searched - one Moodle site can support thousands of courses
- Emphasis on strong security throughout. Forms are all checked, data validated, cookies encrypted, etc.
- Most text entry areas (resources, forum postings, etc.) can be edited using an embedded WYSIWYG HTML editor

Who uses Moodle?

Moodle has over 50,000 installations worldwide.

Here are just a few of them:

Alaska Pacific University	Missouri State University
Cornell University	University of California at Santa Barbara
Louisiana State University	University of Minnesota

APOGEE SUITE™

INTEGRATION SOLUTIONS

INTEGRATION SOLUTIONS

Integration of the best of breed Open Source Solutions makes the Apogee Suite a more versatile solution for many businesses, schools, and enterprise installations. Taking advantage of Asterisk the Open Source PBX and weaving it into your everyday collaboration makes perfect sense and lowers the Total Cost of Ownership and your bottom-line!

APOGEE SUITE™ LEARNING MANAGEMENT SOLUTIONS

Moodle is a Learning Management System that is mature, and supported by a very large user base. Moodle is a cost effective, and feature packed (LMS) and includes a:

- Rich User Experience
- Dynamic Architecture for Participation
- Collective Intelligence and Trust
- Cost Effective Scale out Solution
- Integrated and Coupled System using Apogee Suite

WHAT ARE THE BENEFITS

- Increased User Adoption
- Reduced Cost
- Reduced Time to Deployment
- Zero footprint client
- Reduced Risk
- Reduced Time
- Reduce search and discovery time
- Can be hosted by Tejas Technologies
- Installed on your servers, supported by Tejas Technologies Inc.
